

# Bear With Butterfly Wings

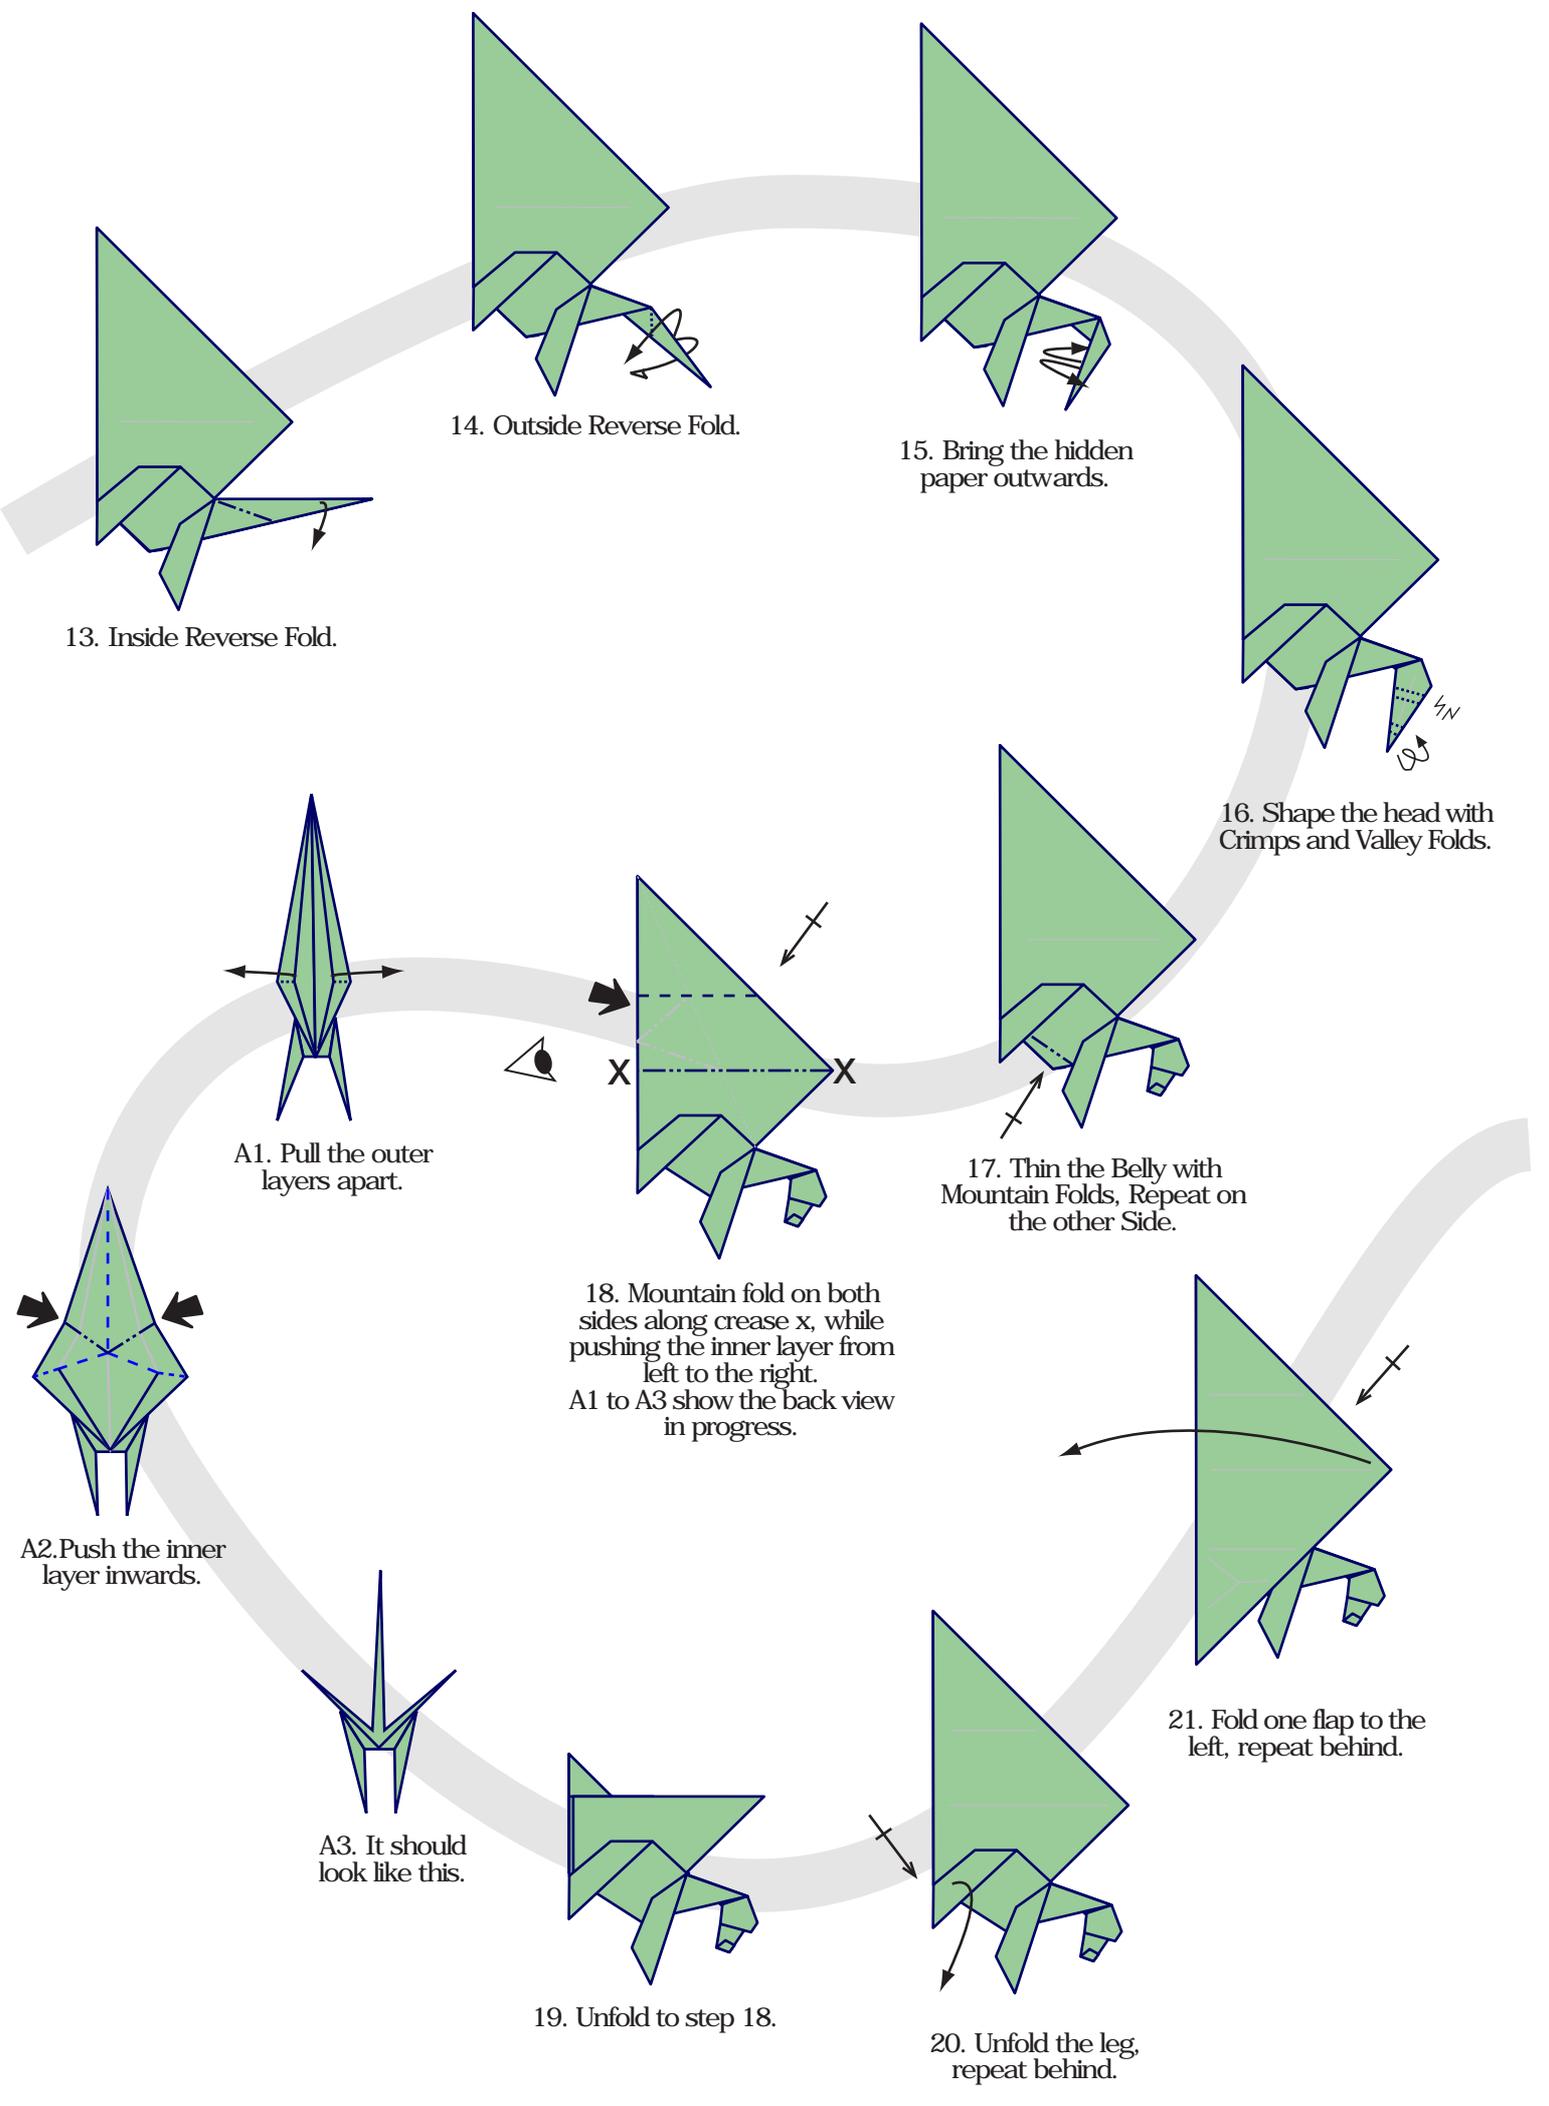

Design & Diagrams by Anna Kastlunger (2008/2009)

Someone said that a blintzed Fishbase would be perfect to make all kinds of winged creatures. What shall I say, he was right. The example below shows what I have come up with.

Usual 15cm Origami paper works fine for this model.

13. Inside Reverse Fold.

14. Outside Reverse Fold.

15. Bring the hidden paper outwards.

16. Shape the head with Crimps and Valley Folds.

17. Thin the Belly with Mountain Folds, Repeat on the other Side.

18. Mountain fold on both sides along crease x, while pushing the inner layer from left to the right. A1 to A3 show the back view in progress.

21. Fold one flap to the left, repeat behind.

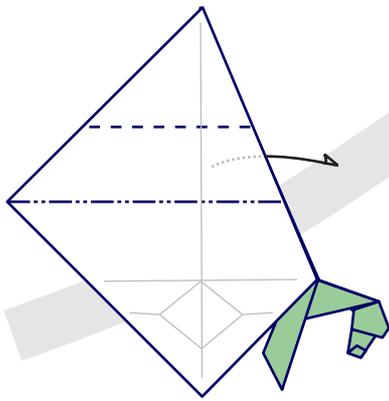

19. Unfold to step 18.

20. Unfold the leg, repeat behind.

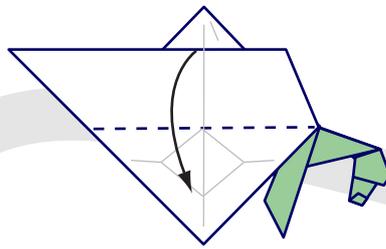

A1. Pull the outer layers apart.

A2. Push the inner layer inwards.

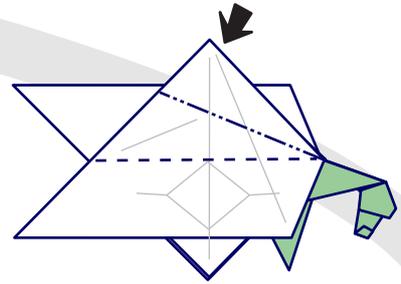

A3. It should look like this.

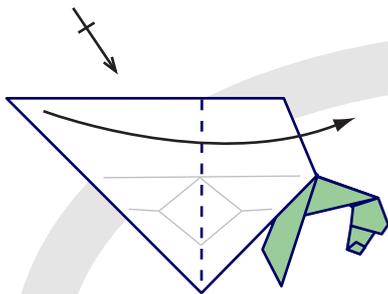

22. Refold along the creases made in step 18.

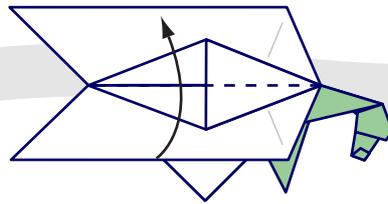

23. Valley fold one layer down.

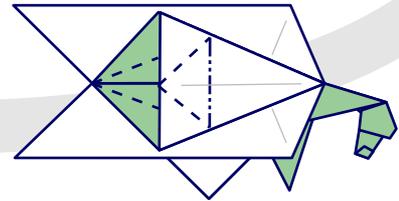

24. Squash on existing creases.

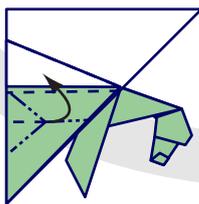

27. Valley fold one layer; repeat behind.

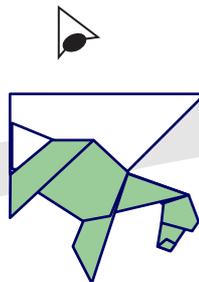

26. Fold the wing back up.

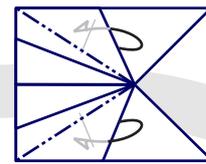

25. Petal inside.

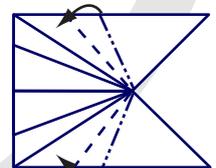

28. Refold the leg; repeat behind.

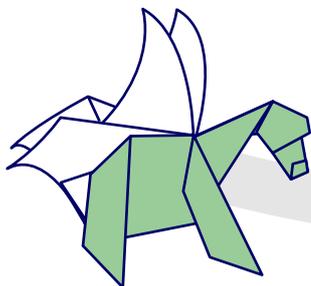

29. Like this. The next step shows the wings from above.

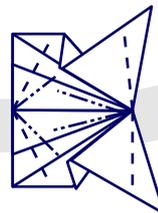

30. Mountain fold the flaps inside.

31. Crimp.

33. The finished bear.

32. Shape with soft mountain and valley folds.
