Tower of Pisa / Torre di Pisa

I've designed this model on the train from Milano to Verbania for the CDO Convention Contest 2008.

Foil paper, at least 15 x 15 cm in size is recommended and will give a tower about 4 cm in height.

1. Waterbomb base.

2. Fold to the center and unfold. Repeat on all flaps.

3. Precr ease into eighths. Repeat on all flaps.

4. Reverse fold in and out on existing creases. Repeat on all flaps.

5. Make the tower three-dimensional.

6. Open and flatten the base.

7. Lean the tower to one side, slightly adjusting the creases at the base as necessary.

8. Shape the base with mountain folds.
